

Know when your site is down, and whether it's you or a provider.

FlareWarden checks your site around the clock and warns you before its SSL certificate expires. It can also look for error messages on your pages and follow the payment, hosting and email services your site relies on.

Free: 15 monitors, no card

About 2 minutes to set up a site

A status page on every plan

Outages found too late

Customers find out first

The site goes down overnight, and you hear about it from a customer, or not at all.

"Up" isn't always working

The server answers, but the page shows an error message instead of your products.

It may not be your site

When a payment or hosting provider has an incident, checkout can fail while your own server is fine.

Certificates expire quietly

An expired certificate puts a security warning in front of every visitor.

Every plan

includes a status page, Free too

flarewarden.com has 6 things worth monitoring

We detected 6 dependencies and 4 content checks. We recommend monitoring 6 of them — their dependencies had 18 incidents in the last 21 days.

FlareWarden checks your site as often as every **30 seconds**. Before alerting, we ask other regions to re-check a failure; if any of them sees your site up, no alert goes out.

4 critical

2 important

Start monitoring →

We start monitoring flarewarden.com on the Free plan as soon as you verify your email. Your estimate for 1 site fits it: 7 of 15 monitors. No credit card · 2-minute setup.

The free scan at flarewarden.com/what-can-i-monitor, run on our own site: what it found, and how many monitors that would use. No account needed.

Four questions, answered all day and all night

Is the site up?

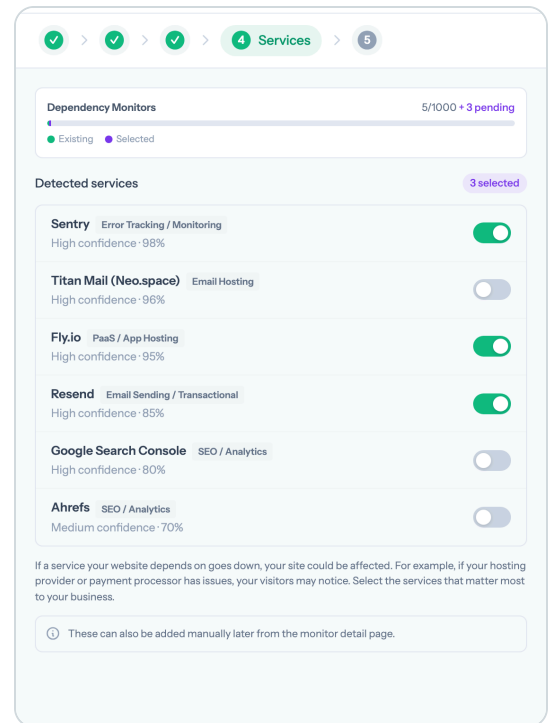

Uptime checks run as often as every 5 minutes on Free, every minute on Starter and every 30 seconds on Business and up. Before alerting, we ask other regions to re-check a failure; if any of them sees your site up, no alert goes out.

Is the page right?

Content checks look for text that should, or should not, be on a page. When you add a site, Smart Setup suggests checks for what it finds there, such as error-message detection and a page-title check. Keep the ones you want.

Are your providers OK?

Smart Setup also reads your site's DNS records and page HTML and suggests the third-party services it recognizes, such as payments, hosting and email. It recognizes 300+ services by their signatures, not every one. Each provider you keep follows its status page (or, where FlareWarden can't read the page's format, checks that it loads), and alerts about it follow what that page reports.

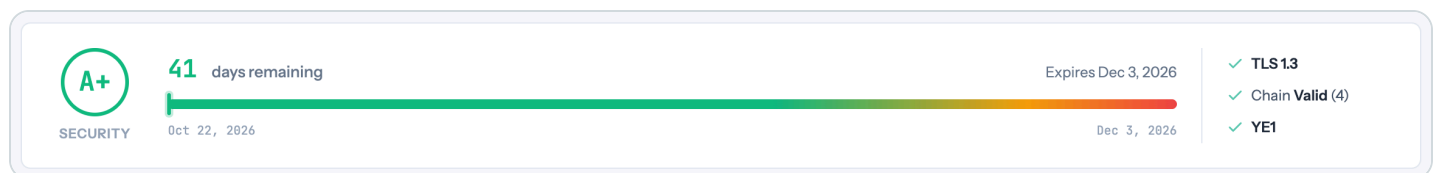

Smart Setup on flarewarden.com: six services found, three switched on. Only the ones switched on are added.

Will the certificate expire?

Every website check includes its SSL certificate and DNS. FlareWarden warns you before the certificate expires, and can alert you when it changes.

Alerts, and a page for customers

Alerts go by email, Slack, Discord or Google Chat (the last three in beta), or as signed webhooks. Every plan includes a status page your customers can subscribe to.

A site's certificate at a glance: days left, expiry date, TLS version and chain.

STATUS	NAME	SEVERITY	UPTIME	RESPONSE	COMPONENTS	AVAILABILITY
	 Sentry https://status.sentry.io	Critical	100.0%	169ms	—	
	 Fly.io https://status.flyio.net	Critical	100.0%	394ms	4	
	 Resend https://resend-status.com	Critical	100.0%	361ms	3	

The providers kept for flarewarden.com, each with its status, severity and uptime.

PLANS AND PRICING

Start free, and pay only when you need more

Every plan is one pool of monitors. Your website uses one, with its SSL and DNS checks included. Each content check or provider you add uses one more. A store with one website, two providers and an error-message check uses 4 monitors, well within Free’s 15.

Plans	Free \$0 no card, no expiry	Starter \$10 per month	Business \$29 per month
Monitors in total	15	30	100
Fastest uptime check	5 minutes	1 minute	30 seconds
Status pages	1	2	5, on your own domain
Status page subscribers	50	250	1,000
Team members	2	5	25
Chat and webhook destinations	2	10	25
Check history	90 days	180 days	1 year

Growth (\$79 a month) and Agency (\$229 a month) cover 300 and 1,000 monitors. Prices in US dollars as of October 2026; yearly billing is 10 times monthly.

7-day trial on Starter and up

A card is required. Cancel within the 7 days and the account moves to Free immediately, with no charge. One trial per account.

Good to know

- FlareWarden doesn’t place test orders or sign in: there are no browser, login or transaction checks.
- No SMS or phone alerts, and no domain-expiry alerts.

Getting started

1. Scan your site at flarewarden.com/what-can-i-monitor. No account needed.
2. Start free at flarewarden.com. No card, and Free doesn’t expire.
3. Add your site, keep the suggestions you want, and turn on a status page.
